DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-23 and 25-45, drawn to a "method," classified, for example, in class 438, subclass 5.
 - II. Claim 24, drawn to a "system," classified, for example, in class 700, subclass 121.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)).

In this case, for example, the apparatus of claim 24 could be used for positioning a "workpiece" other than a "substrate within a semiconductor processing apparatus," contrary to the method of claim 1 requiring a "substrate in a semiconductor processing system." As a different example, the apparatus as claimed in claim 24 could operate without sensor movement by use of a plurality of sensors, while the method of claim 25 contrarily requires adjustment of sensor orientation.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
